- Kampo-preparation-

**TSUMURA Kamishoyosan Extract Granules for Ethical Use**

<kamishoyosan>

### DESCRIPTION

**Composition**

- 7.5 g of TSUMURA Kamishoyosan extract granules (hereafter TJ-24) contains 4.0 g of a dried extract of the following mixed crude drugs.
  - JP Bupleurum Root .................. 3.0 g
  - JP Peony Root .......................... 3.0 g
  - JP Atractylodes Lancea Rhizome .... 3.0 g
  - JP Japanese Angelica Root ........... 3.0 g
  - JP Poria Sclerotium ................... 3.0 g
  - JP Gardenia Fruit .................... 2.0 g
  - JP Moutan Bark ....................... 2.0 g
  - JP Glycyrrhiza ........................ 1.5 g
  - JP Ginger ............................. 1.0 g
  - JP Mentha Herb ....................... 1.0 g

**Inactive ingredients**

- JP Magnesium Stearate
- JP Lactose Hydrate

**Dosage form**
- Granules

**Color**
- Yellow-brown

**Smell**
- Characteristic smell

**Taste**
- Slightly bitter

**ID code**
- TSUMURA/24

### PRECAUTIONS

1. **Careful Administration (TJ-24 should be administered with care in the following patients.)**
   - (1) Patients with an extremely weak gastrointestinal tract
     - [Anorexia, epigastric distress, nausea, vomiting, abdominal pain, diarrhea, etc. may occur.]
   - (2) Patients with anorexia, nausea or vomiting
     - [These symptoms may be aggravated.]

2. **Important Precautions**
   - (1) When TJ-24 is used, the patient’s “SHO” (constitution/symptoms) should be taken into account. The patient’s progress should be carefully monitored, and if no improvement in symptoms/findings is observed, continuous treatment should be avoided.
   - (2) Since TJ-24 contains Glycyrrhiza, careful attention should be paid to the serum potassium level, blood pressure, etc., and if any abnormality is observed, administration should be discontinued.
   - (3) When TJ-24 is coadministered with other Kampo-preparations (Japanese traditional herbal medicines), etc., attention should be paid to the duplication of the contained crude drugs.

SHO: The term “SHO” refers to a particular pathological status of a patient evaluated by the Kampo diagnosis, and is patterned according to the patient’s constitution, symptoms, etc. Kampo-preparations (Japanese traditional herbal medicines) should be used after confirmation that it is suitable for the identified “SHO” of the patient.

3. **Drug Interactions**

   Precautions for coadministration (TJ-24 should be administered with care when coadministered with the following drugs.)

### STORAGE

Store in light-resistant, air-tight containers.

### EXPIRATION DATE

Use before the expiration date indicated on the container and the outer package.

---

**Approval No.** (61AM)1120

**Date of listing in the NHI reimbursement price** October 1986

**Date of initial marketing in Japan** October 1986

---

**INDICATIONS**

TJ-24 is indicated for the relief of the following symptoms of those women with delicate constitution who are easily fatigued and are apt to have stiffness shoulder, psychoneurotic symptoms including anxiety, and sometimes tendency to constipation:

- Oversensitivity to cold, delicate constitution, menstrual irregularity, dysmenorrhea, climacteric disturbance and automatic imbalance syndrome peculiar to women resembling climacteric disturbance

**DOSAGE AND ADMINISTRATION**

The usual adult dose is 7.5 g/day orally in 2 or 3 divided doses before or between meals. The dosage may be adjusted according to the patient's age and body weight, and symptoms.
4. Adverse Reactions

TJ-24 has not been investigated (drug use investigations, etc.) to determine the incidence of adverse reactions. Therefore, the incidence of adverse reactions is not known.

(1) Clinically significant adverse reactions

1) Pseudoaldosteronism: Pseudoaldosteronism such as hypokalemia, increased blood pressure, retention of sodium/body fluid, edema, increased body weight, etc. may occur. The patient should be carefully monitored (measurement of serum potassium level, etc.), and if any abnormality is observed, administration should be discontinued and appropriate measures such as administration of potassium preparations should be taken.

2) Myopathy: Myopathy may occur as a result of hypokalemia. The patient should be carefully monitored, and if any abnormality such as weakness, convulsion/paralysis of limbs, etc. are observed, administration should be discontinued and appropriate measures such as administration of potassium preparations should be taken.

3) Hepatic dysfunction and jaundice: Hepatic dysfunction and/or jaundice with remarkable elevation of AST (GOT), ALT (GPT), Al-P and \( \gamma \)-GTP etc. may occur. The patient should be carefully monitored for abnormal findings. Administration should be discontinued and appropriate therapeutic measures should be taken, if abnormalities are observed.

4) Mesenteric phlebosclerosis: Mesenteric phlebosclerosis may occur with long-term administration. If symptoms such as abdominal pain, diarrhea, constipation, and abdominal distension repeatedly occur, or if the patient tests positive for fecal occult blood, administration should be discontinued. At the same time, tests such as CT and colonoscopy should be performed, and appropriate measures should be taken. Intestinal resection has been reported in some cases.

(2) Other adverse reactions

<table>
<thead>
<tr>
<th>Incidence unknown</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hypersensitivity</td>
</tr>
<tr>
<td>Rash, Redness, Pruritus, etc.</td>
</tr>
<tr>
<td>Gastrointestinal</td>
</tr>
<tr>
<td>Anorexia, Epigastric distress, Nausea, Vomiting, Abdominal pain, Diarrhea, etc.</td>
</tr>
</tbody>
</table>

Note 1) If such symptoms are observed, administration should be discontinued.

5. Use in the Elderly

Because elderly patients often have reduced physiological function, careful supervision and measures such as reducing the dose are recommended.

6. Use during Pregnancy, Delivery or Lactation

Use of TJ-24 in pregnant women, women who may possibly be pregnant is not recommended. [Moutan Bark contained in TJ-24 may cause premature birth or abortion.]

7. Pediatric Use

The safety of TJ-24 in children has not been established. [Insufficient clinical data.]

PHARMACOLOGY

1. Actions on climacteric disturbance

(1) Oral administration of Kamishoyosan to ovariec-toimized mice inhibited a stress loading-related reduction of the duration of pentobarbital sodium-induced sleep\(^3\).

(2) Oral administration of Kamishoyosan to ovariec-toimized rats inhibited an LH-RH-induced elevation of skin temperature\(^3\).

(3) Oral administration of Kamishoyosan to rats after ovariec-toomy inhibited the increase in locomotor activity by intracerebroventricular injection of corticotropin releasing factor\(^3\).

PACKAGING

Bottles of 500 g and boxes of 5 kg (500 g × 10 bottles) 2.5 g × 42 packets 2.5 g × 189 packets
